/clone_lib="Lambda-PRL2"
/clone_lib="Lambda-PRL2"
/note="Vector: lambda Zip-Lox; Site_l: Sal; Site_2: Not;
Lambda PRL2 is a cDNA library derived from equal
quantities of 4 pools of mRNA. The mRNA sources were 1) 7
day germinated etiolated seedlings; 2) tissue culture
grown roots; 3) steade plants half with 24 hour light
cycle, half on 16 hr light, 8 hour dark-rosettes; 4)
same plants as 3 but aerial tissue (stems, flowers and
siliques. The vector is BRL's lambda Zip-Lox. The cDNA
inserts were directionally cloned with Sal-Not arms using
ollog off primed cDNA.

XhoI; The CDNA library was constructed from mRNA isolated
from germinating shocts of 3 day old seedling for the
cultivar Williams 82. The seedlings were germinated in a
growth chamber using germination paper in a solution
containing 100ppm auxin. Complementary DNA was synthesized
from mRNA using a primer consisting of a poly(dT) sequence
with a XhoI restriction site. EcoRI adapters were ligated
to the blunt-ended cDNA fragments followed by XhoI
digestion. The cDNA fragments were directionally cloned
into the EcoRI-XhoI restriction site of the pBluescript
vector. The ligated cDNA fragments were transformed into
DH10B host cells (GibcoBRL). This library was constructed
in the laboratory of Dr. Randy Shoemaker."

times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Gryza sativa, Nipponbare variety using EcoRI as the cloning enzyme. The library contains 55,296 clones with an average insert size of 121 Kb providing approximatley 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."

acid sequence of the VDE was deduced from an isolated CDNA clone (AAT66242). VDE nucleic acids (see also AAT66241, AAT66243), in sense or antisense orientation, can be used in genetic constructs to modify VDE levels in plants. Increased levels result in the plant being tolerant of increased light and therefore more productive and/or more resistant to disease. Underexpression of VDE increases photosynthetic efficiency under low light. The photosensitivity of a range of crops, trees and ornamentals can be modified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The 55 kDa violaxanthin de-epoxidase (VDE) (AAW09875) of tobacco catalyses the de-epoxidation of violaxanthin to zeaxanthin and antheraxanthin. This system, termed energy dependent non-radiative energy dissipation or non-photochemical fluorescence quenching, reduces the quantum efficiency of photosystem II (PSII), helping to prevent PSII over-reduction and photoinhibitory damage. The amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA encoding plant violaxanthin de-epoxidase - used to modify the

This system, termed energy dependent concradiative energy dissipation or non-photochemical fluorescence quenching, reduces the quantum efficiency of photosystem II (PSII) helping to prevent PSII over-reduction and photosinhibitory damage. The amino acid sequence of the VDE was deduced from an isolated con an an acid sequence of the VDE was deduced from an isolated con a contisens orientation, can be used in genetic constructs to modify VDE levels in plants. Increased levels result in the plant being tolerant of increased light and therefore more productive and/or more resistant to disease. Underexpression of photosensitivity of a range of crops, trees and ornamentals can be

                                                                                                                                                                                                                                                                                                                       The violaxanthin de-epoxidase (VDE) (AAW09876) of Arabidopsis catalyses the de-epoxidation of violaxanthin to zeaxanthin and antheraxanthin. This system, termed energy dependent non-radiative energy dissipation or non-photochemical fluorescence quenching, reduces the quantum efficiency of photosystem II (PSII), helping to prevent PSII over-reduction and photoinhibitory damage. The amino cid sequence of the VDE was deduced from an isolated cDNA clone (AAT66243). VDE nucleic acids (see also AAT66241-42), in sense or antisense orientation, can be used in genetic constructs to modify VDE levels in plants. Increased levels result in the plant being tolerant of increased light and therefore more productive and/or more resistant to disease. Underexpression of VDE increases photosynthetic efficiency under low light. The photosensitivity of a range of crops, trees and ornamentals can be modified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      951 MAVATHCFTSPCHDRIRFFSSDDGIGRLGITRKRINGTFLLKILPPIQSADLRTTGGRSS 1010

```
The present sequence is a MIM protein from Arabidopsis thaliana, which contributes to recombination repair of DNA damage in plant cells. The protein was tracked down with the help of a T-DNA tagged Arabidopsis mutant showing hypersensitivity to methyl methanesulphonate (MMS). It shows homology to a member of SMC (Structural Maintenance of Chromosomes) protein family and confers hypersensitivity to treatment with MMS, X-rays, UV light or mitomycin C. The present sequence is useful for DNA repair in plant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  971..1007

pre-erythrocytic liver stage antigen. 3 (LSA-3) protein. The encoding gene sequence was isolated by screening a P. falciparum strain T9/96 library with serum from a missionary treated by prophylaxis (for strain T9/96 library with serum from a missionary treated by prophylaxis (for strain T9/96 see F84010286). Of 20 clones isolated, clone 7928 was used to screen a library generated from Thai strain Kl. One clone contained a comprises a 1.8 kb region encoding 3 major blocks of tetrapeptide comprises a 1.8 kb region encoding 3 major blocks of tetrapeptide cropeats (especially the amino acid sequence VEES, VEEN, VEEI, VAPT, etc.) and a 3' hydrophobic region corresponding to a glycosyl-phosphatidyl- inositol membrane anchoring sequence. The cromation relates to new polypeptides of at least 10 amino acids derived from the LSA-3 protein with the exception of the peptides AMW24/91-4.

The LSA-3 peptides can be used to raise antibodies and as vaccines for immunotherapy of malaria.
                                                                                                                                                                                                                                                               Plasmodium falciparum; pre-erythrocyte; liver stage antigen; serum; prophylaxis; Thai strain; gene organisation; exon; intron; hydrophobic; glycosyl-phosphatidylinositol membrane anchoring sequence; antibody; vaccine; Immunotherapy; malaria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  391 EKLLIKEAVEIEEEVEKEV----EKVRDTEMTLFQRLLEGFKELQQD----EENFVREL 441
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               858 tilenveettaesvttfsnileeigentitndti---eekleelhenvlsaalentgsee 914

Mitosin is involved in the regulation of the mammalian mitotic cell cycle. Mitosin as with E2F-1 (see AAR72824) interacts with the retinoblastoma protein (the retinoblastoma tumour suppressor gene product). Mitosin is first synthesised at the G1/K boundary, it is then phosphorylated from S through M phase, and during mitosis, is closely associated with the centromerse/kinetochores at the mitotic spindle poles. Mitosin is necessary for a eukaryotic cell to enter the M phase of the mitotic cell cycle and its degradation is necessary for a cell to advance on to the next stage. Mitosin is thus useful for controlling cell growth as overexpression of mitosin prevents a cell from exiting the M phase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            An anti-mitosin antibody, antibody fragment or a phosphorylated mitosin mutein ( or nucleic acid encoding it) can also be used to inhibit cell division which is particularly useful for the study of the cell cycle. A further use is to control hyperproliferative cells, and so control diseases such as psoriasis and breast cancer. It can also be used to block gametogenesis of an immature gamete.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ouery Match 2.0%; Score 147; DB 16; Length 2482; Best Local Similarity 18.4%; Pred. The mitosin protein, can be used to control the growth of cells. An anticosin protein, can be used to control the growth of cells. An anticosin antibody, a mutant or a non-functional analogue of mitosin can inhibit the mitotic cell cycle by preventing the cells from entering the M phase, and over expression of mitosin or its functional equivalent, would inhibit the cycle by preventing cells from leaving the M phase. Antagonists to this protein can be used to control hyperproliferative cells in, (e.g. thyroid hyperplasia, Grave's disease, psoriasis, benign prostatic hypertrophy, il-Fraumeni syndrome, breast cancer, sarcomas and other neoplasms, bladder cancer, colon cancer, lung cancer and various leukaemias and lymphomas). Reintroduction or supplementation of lost mitosin function by introduction of the protein or nucleic acid encoding the protein into a cell can restore defective chromosome segregation, which is a marker of progressing malignancy. Malignant proliferation of cells can then be halted. The protein can also be used for the detection and diagnosis of hyperproliferative 60; 379 LVERLEKTAEEGEKLLIKEAVEIEEEVE----KEVE-KVRDTEMTLFQRLLEGFKELQQ 432 315 lsetlslekkemssiislnkreieeltgengtlkeinaslngekmnligk-sesfanyid 373 450 ---NELQMEATEVEKLFGRALP--IRKLRMALAPHSNFLANHETIKYYVGSKLPGH---- 500 434 nrknele----qlkeafakehqefltklafaeernqnlmleletvqqalrsemtdnqnns 489 374 ereksiselsdgykgeklillgrceetgnayedlsgkykaageknsklecllnectslce 433 490 kseagglkgeimtlkeegnkmgkevndllgeneglmkvmktkhecgnlesepir---- 543 544 -----nsvkereserng-cnfkpgmdlevkeisldsynaglvgleamlrnkelklgese 596 Gaps 501 KRFSWGWEDYFGSIVVAKICSSRRIPRYFRKSPRI------CCGLDSRGLQLFSHGK 551 552 HNLSPAHSINQNVPKGNSGCKFPKDVALMVWEKWGQFAKTAIVAIFILSVASKADAVDAL 611 -----LKECRLEL-AKCISNP-----ACAAN 637 597 kekeciqhelqtirgdletsnlqdmqsqeisglkdceidaeekyisgphelstsqndnah 656 638 VAC-LQTCNNRPDETE--CQIKCGDLFENSVVDEFNECAVSRKKCV--PRK--SDVGDF- 689 -TFDAFDC 725 726 QLHEFHTEENKLVGNLSWRIRTPDGGFFTRSAVQKFVQDPKYPGILYNHDNEYLLYQD-- 783 769 qmhfaelqek-------flslqsehkilhdqhcq--msskmselqtyvdsl 810 784 -- DWYILSSKVENSPEDYIFVYYKGRND--------AWDGYGGSVLYTRSAVL 826 827 PE----SIIPELQTAAQ----KVGRDFNTFIKTDNTCGPEPPL----VERLEKKVEEGE 873 869 eqtgdmsllsnlegavsangcsvdevfcsslgeenltrketpsapakgveeleslcevyr 928 RTIIKEVEEIEEEVEK---VRDKEVTLFSKLFEG-----FKELQRDEENFLRELSKE 922 Query Match 2.0%; Score 147; DB 19; Length 2482; Best Local Similarity 18.4%; Pred. ```
The present invention describes proteins and their fragments (1) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described arre: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II).

(I) and (II) are useful for the development of vaccines against P. falciparum infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are riffins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in the cube control of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insectioides have led to a resistance to drugs and many control of the parasite in many and provide new targets for the parasite in the control of many and provide new targets for the parasite have led to a resistance to drugs and many control of the parasite in many and provides a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               50;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAAB1814 to AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          :| : | : | : | : | 1011 lieetge-----sedskei 1046

                                                                                                                                                                                                                                                                                                                                                 The human RAD50 (hRAD50) is involved in DNA repair and has tumour suppression activity, can be used to detect predisposition to, decrease the risk of or treat cancers. e.g. acute myeloid leukaemia, myeloid splastic syndrome, therapy related myelodysplastic syndrome, therapy related myelodysplastic syndrome, therapy related myelodysplastic syndrome, therapy related myelodysplastic syndrome, and myelodysplastic syndrome, therapy related myelodysplastic syndrome, season blasts. Also disclosed in this invention is Human Septin-2 homologues of which may be used as targets for cancer therapies and central nervous system directed treatment methods, and to measure the proliferative potential of selected cell types.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
